

UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE United States Patent and Trademark Office Address COMMISSIONER FOR PATENTS PO Box 1450 Alexandra, Virginia 22313-1450 www.unpto.gov

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/598,462	08/31/2006	Bernhard Gleich	PHUS040141US2	5782
38107 7590 06/27/2008 PHILIPS INTELLECTUAL PROPERTY & STANDARDS			EXAMINER	
595 MINER ROAD CLEVELAND, OH 44143			FETZNER, TIFFANY A	
			ART UNIT	PAPER NUMBER
			2831	
			MAIL DATE	DELIVERY MODE
			06/27/2008	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.	Applicant(s)	
10/598,462	GLEICH, BERNHARD	
Examiner	Art Unit	
Tiffany A. Fetzner	2831	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS.

- WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
- after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any
- earned patent term adjustment. See 37 CFR 1.704(b).

Status			
1)🖂	Responsive to communication(s) filed on 31 August 2006.		
2a)□	This action is FINAL . 2b)⊠ This action is non-final.		
3)□	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is		
	closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.		

Disposition of Claims

4)🛛	Claim(s) 1-19 is/are pending in the application.
	4a) Of the above claim(s) is/are withdrawn from consideration.
5)	Claim(s) is/are allowed.
6)⊠	Claim(s) 1-19 is/are rejected.
7)	Claim(s) is/are objected to.
8)П	Claim(s) are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
--

10) The drawing(s) filed on 31 August 2006 is/are; a) Accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Ackno	wiedgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a)⊠ All	b) Some * c) None of:
1.	Certified copies of the priority documents have been received.

- 2. Certified copies of the priority documents have been received in Application No.
- 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)		
1) Notice of References Cited (PTO-892)	4) Interview Summary (PTO-413)	
2) Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date	
3) Information Disclosure Statement(s) (PTO/S6/08)	5) Notice of Informal Patent Application	
Paper No(e)/Mail Date 8/31/2006	6) Other:	

Application/Control Number: 10/598,462

Art Unit: 2831

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

 The information disclosure statement (IDS)submitted on 8/31/2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement. The initialed and dated information disclosure statement (IDS) submitted on 8/31/2006 is attached to this Office action.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - Determining the scope and contents of the prior art.
 - Ascertaining the differences between the prior art and the claims at issue.
 - Resolving the level of ordinary skill in the pertinent art.
 - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Application/Control Number: 10/598,462

Art Unit: 2831

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 6. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Richard EP Patent Application EP 0737867 A1 published October 16th 1996, in view of Barbic US patent 7,202,667 issued April 10th 2007, filed June 3rd 2005 with an effective US priority date of June 7th 2004.
- With respect to Claim 1, Richard teaches and shows "A magnetic resonance 7. imaging scanner" [See Figure 1] "comprising: a magnet generating a temporally constant magnetic field": [See components 10.12] "one or more magnetic field gradientgenerating structures" [See 32.42 etc..] "superimposing selected magnetic field gradients on the temporally constant magnetic field;" [See col. 7 lines 20-45] "a radio frequency shield;" [See component 78] "a radio frequency coil disposed inside of the radio frequency shield and selectively producing a radio frequency field; and a magnetic field-modifying structure designed to enhance the temporally constant magnetic field." [See abstract, with respect to component 70; col. 5 lines 23-53]; "the magnetic fieldmodifying structure being disposed inside of the radio frequency shield and including particles of magnetic material generally smaller in at least one dimension than a skin depth of the radio frequency field in the magnetic material dispersed in an insulating binder." [See col. 6 line 8 through col. 7 line 45] Richard lacks specifically stating that the particles are smaller in one dimension than the skin depth in the epoxy matrix which functions as an insulating material, however Barbic, teaches the use of nanoparicles to amplify the generated magnetic field and nanoparticles which are "smaller in at least one dimension than a skin depth of the radio frequency field in the magnetic material dispersed in an insulating binder" are shown and taught in many different geometries throughout the Barbic reference. It would have been obvious to one of ordinary skill in the art at the time that the invention was made to modify the teaching of Richard with the teaching of Barbic in order to achieve better homogeneity because the use of nanoparticles is know to amplify magnetic fields using less than 50% of the usual material with a gain of 75%. [See Barbic col. 10 line 60 through col. 11 line 5.]

Application/Control Number: 10/598,462 Art Unit: 2831

8. With respect to Claim 2, Richard lacks teaching that, "the particles of magnetic material dispersed in the hinder have a fill factor of at least about 50% by volume", but [See Barbic teaches this in col. 10 line 60 through col. 11 line 5.] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 2 and need not be reiterated.

- 9. . With respect to Claim 3, Richard lacks teaching that, the particles of magnetic material are generally smaller in at least one dimension than about one-tenth of the skin depth of the radio frequency field in the magnetic material." However, Barbic teaches this limitation. Because Barbic uses nano-size particles. [See col. 2 line 33 through col 19 line 47.]The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 3 and need not be reiterated.
- 10. With respect to Claim 4, Richard lacks teaching that, "the particles of magnetic material are generally smaller than about 10 microns in at least one dimension." However, Barbic teaches this limitation. Because Barbic uses nano-size particles [See col. 2 line 33 through col 19 line 47.]The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 4 and need not be reiterated.
- 11. With respect to Claim 5, Richard lacks teaching that "the particles of magnetic material are generally smaller than about 4 microns in at least one dimension." However, Barbic teaches this limitation. Because Barbic uses nano-size particles [See col. 2 line 33 through col 19 line 47.] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 5 and need not be reiterated.
- 12. With respect to Claim 6, Richard lacks teaching that "the particles of magnetic material generally do not have a direction of elongation." But the spherical particles of Barbic are spheres. [See figure 12, col. 14 lines 11-25.] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 6 and need not be reiterated.

Application/Control Number: 10/598,462 Art Unit: 2831

- 13. With respect to Claim 7, Richard teaches the ferrous wire shape. [See page 3 col. 3, lines 1-2.] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 2 and need not be reiterated.
- 14. With respect to Claim 8, Richard lacks teaching that "generally wire-shaped particles flare oriented with long directions generally transverse to the temporally constant magnetic field and generally parallel to a tangential direction." However, Barbic teaches this limitation [See col. 11 line 7 through col. 14 line 10 of Barbic.] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1. 7 also apply to claim 8 and need not be reiterated.
- 15. With respect to Claim 9, Richard teaches the "particles of magnetic material are generally planar" because he teaches plates and strips of ferrous particles. [See col. 6 lines 23-35]. The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 2 and need not be reiterated.
- 16. With respect to Claim 10, Richard lacks teaching that "the generally planar particles are oriented with plane normals generally parallel to the temporally constant magnetic field." However, Barbic teaches this limitation. [See col. 7 line 18 through col. 11 line 50] The same reasons for rejection, obviousness, and motivation to combine, that apply to claims 1, 9 also apply to claim 10 and need not be reiterated.
- 17. With respect to Claim 11, Richard shows the radio frequency coil includes a plurality of parallel rungs, and the particles of magnetic material are disposed at least partially between the rungs." [See figures 2, 7, 9] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 2 and need not be reiterated.
- 18. With respect to Claim 12, Richard lacks showing that "the magnetic field-modifying structure includes: a plurality of generally annular structures containing particles of magnetic material, the generally annular structures being oriented genera transverse to the temporally constant magnetic field, the annular structures having annular cross-sections elongated transverse to the temporally constant magnetic field." However, Barbic teaches this limitation. [See figure 4]. The same reasons for rejection,

Application/Control Number: 10/598,462

Art Unit: 2831

obviousness, and motivation to combine, that apply to **claim 1** also apply to **claim 12** and need not be reiterated.

- 19. With respect to Claim 13, Richard lacks showing "the magnetic field-modifying structure includes: a plurality of magnetic generally annular structures containing the particles of magnetic material in the insulating binder, the magnetic generally annular structures being oriented generally transverse to the temporally constant magnetic field, the magnetic annular structures having a longitudinal demagnetization factor parallel to the temporally constant magnetic field and a tangential demagnetization factor in a tangential direction transverse to the temporally constant magnetic field, the longitudinal demagnetization factor being larger than the tangential demagnetization factor to produce tangential flux guiding. However, **Barbic** shows this limitation [See figures 2, and 4] The same reasons for rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to claim 13 and need not be reiterated.
- 20. With respect to Claim 14, Richard lacks teaching "wherein the magnetic fieldmodifying structure has a longitudinal demagnetization factor parallel to the temporally
 constant magnetic field and a tangential demagnetization factor in a tangential direction
 transverse to the temporally constant magnetic field, the longitudinal demagnetization
 factor being larger than the tangential demagnetization factor to produce tangential flux
 guiding." However, Barbic shows this limitation [See figure 3] The same reasons for
 rejection, obviousness, and motivation to combine, that apply to claim 1 also apply to
 claim 14 and need not be reiterated.
- 21. With respect to Claims 15 through 19, these are just synonymous claims, of what has already been addressed, in previous, but substituting synonymous phraseology Since and all of the limitations can be found from the combinational art of Richard in view of Barbic, in the same citations already set forth, the examiner will not reiterate again.

Conclusion

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tiffany Fetzner whose telephone number is: (571) 272-2241. The examiner can normally be reached on Monday, Wednesday, and Friday-

Application/Control Number: 10/598,462 Page 7

Art Unit: 2831

Thursday from 7:00am to 2:10 pm., and on Tuesday and Thursday from 7:00am to 5:30pm.

- 23. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Diego Gutierrez**, can be reached at (571) 272-2245. The **only official fax phone number** for the organization where this application or proceeding is assigned is (571) 273-6300.
- 24. Information regarding the status of an application may be obtained from the Patent Application information Retrieval (PAIR) system Status information for published applications may be obtained from either Private PMR or Public PMR. Status information for unpublished applications is available through Private PMR only. For more information about the PMR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PMR system contact the Electronic Business Center (EBC) at 866-217-9197 (foll-free).

/Diego Gutierrez/ Supervisory Patent Examiner, Art Unit 2831
